

SCHOOL CROSSING OPERATING SYSTEM BE SEEN CROSSING ZONE PROTECTOR Part No. BSCZP6

GLOWING HAND HELD Compliant Class 1 Diamond Grade Reflective
SCHOOL CROSSING BATON WITH A TELESCOPIC POLE

The BSCZP6 is manufactured to comply with or exceed the reflectability standards of the current hand held stop signs by virtue of the addition of its internal weather proof I P65 lighting which enhances its visibility during inclement weather conditions, eg. fog, mist, dust storms, overcast and cloudy conditions, sunrise, sunset, smoke haze and all other generally low light conditions. It is designed to be used in conjunction with Vic. Roads safety wear and operational procedures as for School Crossing Supervisors and is approved to replace the reflective and non-reflective baton only.

OPERATIONAL INSTRUCTIONS

REMOVAL OF BATTERY PACK "A" FOR RECHARGING.

Loosen tightening holder clockwise and slide out battery pack "B". Using the "Indoor use only" battery charger "C" proceed to charge the battery pack for an initial period of between 3 to 5 hours prior to use of the sign.

RE-INSTALLATION OF BATTERY PACK "B"

Push in and turn on switch "E". Slide battery pack "B" inside pole "A" until a "Click" sound is heard or the head lights up. Re-tighten tightening holder anti clockwise. A charging routine of 1 to 2 times per week, each for a period of from 2 to 4 hours should be sufficient to ensure the required performance of the sign.

OPERATING PROCEDURE

It is further recommended that the illumination of the sign be actuated just prior to the operator entering the crossing zone and turned off via the ON/OFF switch "E" located near the top of the pole not before the operator has exited the roadway and has returned to the pavement. To extend the length of the pole simply unloosen tightening holder and slide battery pack "B" to desired height being careful not to fully slide out.

WARNING – Battery charger is for INDOOR USE ONLY AND MUST BE ON A STABLE AND WATER FREE SURFACE.

Plug the charger into the mains and battery pack prior to switching on the power to the wall plug outlet.
